

Response to Dr. Moline Motion to Dismiss

September 12, 2023 – LTL’s lawsuit asks a very simple question: Are Dr. Moline’s assertions that 33 mesothelioma patients were only exposed to asbestos through talc true, or did she know they were exposed to asbestos through other means? One federal court has already found she knew that at least one individual had such alternative exposures, and Dr. Moline was recently forced to admit the same about a second. And as alleged in the Complaint, the evidence shows the same is true of even more. LTL is confident that the Court will see through Dr. Moline’s dismissal effort, and that the truth—supported by decades of unbiased, real science—ultimately will prevail.
